

Master-Praktikum - Learning for self-driving cars and intelligent systems - Winter 2019/20

Weekly Report : Sensor Modality Fusion

Chenguang Huang, Nikhitha Radhakrishna Naik
Supervisor: Patrick Wenzel

25 November 2019

Accomplished tasks:

- Find 3D object detection papers using point cloud only:
 - VoxelNet: End-to-End Learning for Point Cloud Based 3D Object Detection(with code)
 - PointRCNN: 3D Object Proposal Generation and Detection from Point Cloud(with code)
- Try to run some existing networks for VoxelNet and PointRCNN
- Trained the Image Only network for more epochs
- Find 3D object detection papers using monocular image only:
 - Monocular 3D Object Detection for Autonomous Driving

Tasks planned for next week:

- Continue running some existing 3D Object Detection networks
- Implement the metrics for evaluating 3D Object Detection
- Start to implement a state-of-the-art fusion network

Issues / Roadblocks:

- The computing resources in the lab are mostly occupied by some users; so we did not get enough storage to run the network implementations.
