Master-Praktikum – Learning for self-driving cars and intelligent systems – Winter 2019/20 Weekly Report: Sensor Modality Fusion
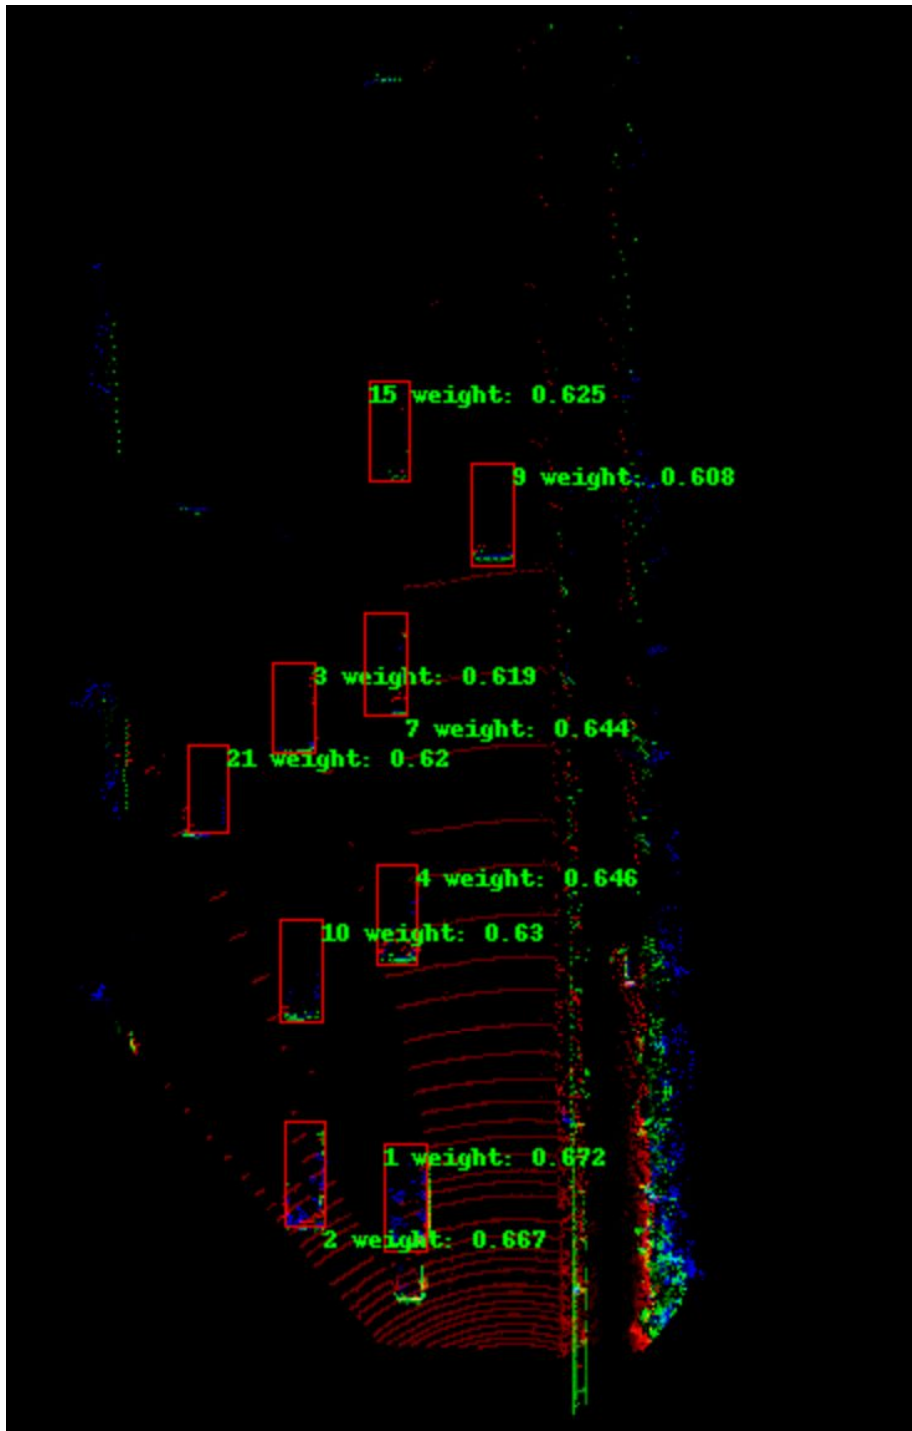

Chenguang Huang, Nikhitha Radhakrishna Naik
Supervisor: Patrick Wenzel

13 January 2020

Accomplished tasks:

- Started working on a Mixture of Experts methodology.
    - Looked deeper into the outputs of the network
    - Weights are getting updated accordingly: by setting the image feature input to zero while keeping bev feature input, the output weight for the image will tend to 0 and that for bev will tend to 1.
- Evaluated MoE with the validation set
- Visualized the MoE output weights for the corresponding regions of image and bev

- Investigated a paper for improving bounding box results (epBRM):

  https://arxiv.org/abs/1910.04853

Tasks planned for next week:

- Continue to work on Mixture of Experts for better results
- Continue to work on endpoint Box Regression Module

Issues / Roadblocks:

- The results of MoE evaluation doesn't look that good. Look into training details.
